

## Encavis creates sustainable value add: community development

Through our (financial) support of the Sopowerful Foundation, we enable solution finding and collective action to improve the quality of life in local communities in Southeast Africa.

We support initiatives that sustainably improve the quality of life of local people through reliable, solar-powered electricity. Sopowerful implements projects in four sectors: healthcare, education, WASH, and agriculture.

In the field of *healthcare*, our solar-powered electricity enables:

- a wider range of health services
- an expansion of operating hours (including nighttime operations)
- a safer, more accessible environment
- better hygiene thanks to a reliable water supply

In the field of *education*, our solar-powered electricity enables:

- studying and classes at night
- improved passing rates
- improved digital literacy (IT lessons possible)
- a safer, more accessible learning environment.

In the field of *WASH* (Water, Hygiene, Sanitation), our solar-powered electricity enables an improved access to clean water sources.

In the field of *agriculture*, our solar-powered electricity enables:

- improved yield from farming areas due to year-round water access
- a reduction of food-insecurity through food availability in the dry season.

**IMPACT: In just three years, a total of 18 projects have been implemented in three countries, creating a tangible impact for nearly 77,000 people through solar energy.**
